## Tech Stack

## Experience

### PHP software engineer

CJSC "Online store Euroopt" - Jun 2024 - Now  
Contributed to the development of an analytics service, focusing on event collection from websites. Additionally, implemented enhancements to the email.by website, including offer matches and SLA client integration

### PHP software engineer

Freelancer - Aug 2021 - Jun 2024  
Designed and developed services to streamline client verification and compliance (KYC) processes. Created online payment services to facilitate seamless transactions. Additionally, architected and developed Viber and Telegram bots to enhance customer engagement and support.

### Fullstack software engineer

Zhilrent - Aug 2019 - Aug 2021  
Developed and implemented Zhilrent PMS, a comprehensive property management platform for short-term rental operations. Key features included automated self-check-in solutions, financial tracking and reporting, tenant management tools, multi-channel communication (SMS/telegram/app notifications), and real-time maintenance monitoring. Spearheaded end-to-end infrastructure design, including cloud-based server configuration, relational database architecture, and secure network setup to ensure scalability, performance, and data integrity. Optimized workflows for seamless integration of IoT devices and third-party APIs, enhancing operational efficiency for property managers and owners.

## Higher education

### Belarusian State University of Informatics and Radioelectronics

Sep 2015 - Sep 2019  
Faculty of Infocommunication. Speciality - Infocommunication technologies (networks of infocommunication)
